

APIS

Asset Protection Information System

APIS – the Asset Protection Information System is a web based data management tool for loss prevention data. It is the fifth generation data management tool produced by the design team at RuMe Interactive Corporation and Learn it Solutions in Farmingdale, NY.

APIS applications include data management for loss prevention Cases, Investigations, Incident Reporting, Civil Recovery and Restitution Management, Personal Data, Training, Award Management, Missing Merchandise Reports, Claims Management as well as Audit function and Statistical Analysis.

APIS system is hosted via the Internet allowing all authorized Users to access to system capabilities based on location, user authority and security levels. Users may be limited as to what modules or what data within those modules may be accessed. APIS also comes with an interactive training program available 24/7 for system training and user reference. This program facilitates training over a geographically dispersed business operation while ensuring consistency and comprehension of the training material.

APIS – A comprehensive data management solution for retail Loss Prevention

Retailers can no longer afford to purchase loss prevention information management services on a fragmented basis. The **APIS value proposition** is that it offers retailers the first comprehensive corporate solution designed to minimize theft exposures and recover significant, bottom-line financial losses from shortage. In fact, the APIS strategy delivers more than a solution – it provides the retailer with the enabling technology, tools and best practice guidelines necessary to effect substantial, permanent improvement in managing inventory shrink.

When you can only have one system, shouldn't your one system have it all ?

APIS Modules include:

Case Management

- Comprehensive case details, images & evidence
- Court Information
- Detailed link analysis of related records

Investigations

- Manage Employee or General investigations
- Handle investigations individually or through a team approach

Incident Reporting

- Tracks and reports incidents and events
- Provide incident follow up and action plan

Personal Database

- Personal Information
- Internal & external records
- Address history, employment info, images and more

Recovery

- Manages Civil Demand and Restitution
- Letter generation & accounting
- Allows for export to third party vendors

Statistics

- Detailed stats & analysis
- Library of existing report templates
- Customized reports

MMDR

- Manage Missing Merchandise Discrepancy Reports between locations, warehouses and vendors
- Track known or suspected losses

Awards

- Manages employee award and incentive programs
- Manages payments and budgets
- Print award certificates

Training

- Track internal & external classes/seminars
- Identify promotable & relocatable candidates
- Track health, safety and immunizations

Claims Management

- Capture workers compensation and general liability claims
- Data input within APIS or externally through editable PDF forms

APISaudit

- Online audit reporting and data analysis
- Create and save survey templates
- Assign audits to specific store and user groups

...and more to come!

- Contact Management
- Asset Management
- Emergency Management
- Risk management

APIS Features include:

APISsummary

- Instant access to activity summary
- Week to date, month to date, year to date totals
- Real time snapshot

APISflash

- Work flow management
- See records pending for your approval, assigned to you for follow up open in progress

APISdataweb

- Connects related records
- Displays related data at the touch of a button
- Facilitates research and investigation

APISsuperweb

- Investigative resource tool
- Enhanced link analysis
- Identifies potential fraud related patterns between unrelated records

APISevidence

- Allows for the attachment of any digital files to any APIS record
- Maintain all aspects of the case electronically

APISspell

- Checks narrative entries for misspelled words
- Saves time and enhances accuracy in reports
- Custom dictionary settings

APISmail

- Allows Users to send and receive messages within the APIS user group
- Optional external mail capabilities

APIStips

- On-screen help tips to describe data entry for each input field
- Enhances consistency and increase ease of data entry

APISsearch

- Comprehensive
- Use nearly any field criteria
- Allows for full or partial searches

Ad Hoc Reporting

- The report writer offers extreme flexibility in developing and grouping report data for advanced analysis.
- Create and save report templates

Narrative Wizard

- Narrative or summary data entry populates based on a series of questions presented in a wizard
- The narrative wizard is customizable by client

Bar Code Scanning

- Scan in barcodes to capture merchandise information and retrieve merchandise description and pricing
- Print barcodes on civil demand or restitution letters to facilitate payment

GIS Mapping

- Display cases, investigations, incidents and other key information on the map
- Visually identify trends and patterns
- Map by region, district or location

APIStask

- Ability to schedule specific assignments or tasks to self or others
- Calendar feature with all the tasks listed
- Reminder notice

Personal Wizard

- Simplified Data input
- Effective and efficient method to search the database
- Improved Speed and data Integrity

APIScomm Communications Center

- Announcements by location
- **Be On The Lookout** Alerts
- Scrolling Message Center

APIS - Asset Protection Information System

Premiering in 1987, APIS, The Asset Protection Information System, was an AS400 application that was in use for over 14 years as a tool to manage Security and Loss Prevention data. Enhanced with new applications and functionality, and redesigned with ASP and Internet / Intranet capabilities, APIS2002 was released in June, 2002 and is the fifth generation Data Management system produced by the design team at RuMe Corporation and RuMe Interactive. APIS modules include:

- **Case Management**
- **Investigation Management**
- **Incident Reporting**
- **Civil Recovery / Restitution**
- **Awards**
- **Statistics**
- **Audit**
- **Emergency Management**
- **Human Resources / Training**
- **Claims Management**
- **Missing Merchandise Discrepancy Report**
- **...and there is more on the way!!**

Another important characteristic is that the Recovery module will allow a client to manage their Civil Demand and Restitution programs **in-house**, as well as providing the option to outsource that function to a **third party collection vendor**. APIS also provides the capacity for integration with other service providers like **Aspect** Loss Prevention, **USMA** and **TIRS**, that offers significant enhancements to a company's risk mitigation profile by improving communication, improving pre-employment screening and enhancing the investigative process.

We can't give it all away just yet - but we know you are going to love it! You really have to see it to believe it - so why not call us today to schedule an online demonstration and see the system in action ? Call us today at **631-225-3355** to schedule an online demo.

We're not finished with APIS yet!

APIS is continuing to grow and evolve with new enhanced features, new modules and integration with a variety of solutions providers. We are currently planning expansion for the next 5 years!

Want a hint?.....

Imagine tying APIS into an exception reporting system to automate research and development of supporting case data and reports. You'll be able to export exception data and attach it to your investigations or call exception reports automatically from APIS so that they run and attach themselves to your investigation file for follow-up and review. Sound good??.... we're doing it!

1) Please select the requirement for your loss prevention data management system? (You may only select one)
